

# Sea Green

*lets make a peaceful environment*

## ABOUT US & OUR MISSION

At Sea Green, We are all about creating a safe, healthy, peaceful, and eco-friendly environment around where everyone lives and works and therefore, we eagerly come to work everyday to help and serve our customers. We are obsessively passionate about our eco-friendly pest control products and strive to keep abreast with changing requirements.

With years of education and training our talented and energetic young team is eager to bring about change in the way the pesticides conventionally used in the homes and commercial buildings using modern revolutionary techniques. We are committed to providing sustainable solutions because they meet the present needs without compromising the well-being of the future generations.

Pesticides are BIOCIDES and they are toxic by design. They kill, reduce or repel insects such as ants, cockroaches, bed bugs, termites, fleas, silverfish, rodents and other organisms that threaten public health and economy. They are designed to target systems or enzymes in the pests which may be identical or very similar to systems or enzymes in the humans and therefore, they pose significant risks to human health and environment. There is a growing concern about children's vulnerability and exposure to the pesticides and their susceptibility. Usage of environmentally friendly new generation pesticides is of paramount importance to all of us especially in homes, schools, shops, restaurants, hospitals, food processing plants, commercial buildings etc.

Given the exposure to the wealth of knowledge on social media today, most often than not customers try to fix their simple pest problems both at homes and commercial buildings by themselves with little or no experience and end up with intensifying the pest problems, as well as exasperating health problems, which requires attention from the experts like us. With professionally trained team, and years of experience eliminating pests, we at Sea Green, will make sure you are protected. We take everyone of you seriously and so engage in building life long relationships with you by providing professional and friendly service at all times.

## Why Choose Us ???

Home is Where your heart is, Where love resides, and Where memories are created, Keep it protected! "You are in safe hands with Sea Green"

Sea Green Pest Control is your best choice for all your residential and commercial pest control needs because we prioritize safety and sustainability without compromising results. At Sea Green Pest Control we attribute our success to satisfied customers who regularly use our services and recommend us to their friends and family. We are committed to protecting your health, home and loved ones from all varieties of unwanted pests and critters.

### **Safer treatments for all**

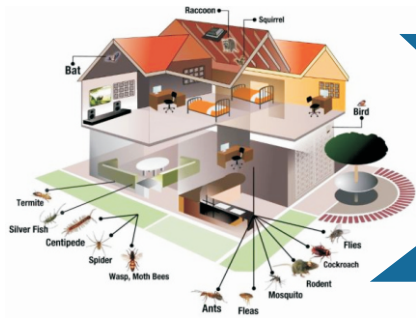

Pest control methods used either at home or at work places must be safe as well as effective. Sea Green Pest Control gets rid of pests using safe application methods combined with low-odor, low-impact harmless products.

### **Safer for environment**

We are in a world where people seek most potent one application products to eliminate the pests, however such products are extremely harmful to the environment. Therefore, we use pest control methods that are generally least harmful to the environment, and non-toxic to the non-targeted insects, mammals or aquatic life. We identify the offending pest and use controlled method that only affects that pest and not the environmentally beneficial insects.

### **QUICK RESPONSE & SAME DAY SERVICE.**

Quick response & same day service.

# HOME PEST CONTROL

At Sea Green, we put you and your family first.

Not only do we provide quick, safe and thorough pest treatment, but we pride ourselves on giving you reliable preventative solutions that can halt a problem before it becomes sinister. Once we have taken the time to understand your needs and determine the best solution, our experienced team will explain the process and guide you every step of the way - so you know exactly what to expect.

## Specialised Pest Control Solutions For Your Home

Pests in a domestic home aren't just a superficial annoyance. They can cause severe structural damage and pose huge health risks to you and your family.

At Sea Green, your health and safety is paramount to us. That's why we believe in providing you with excellent service, such as offering pre purchase pest inspections for when you're buying a new home. We want to be able to detect a small problem before it becomes a huge issue.

We offer solutions to treat any sized pest problem. Our treatments and products are pest specific, and thus not harmful to humans or pets. Therefore, your family can rest a little easier knowing your pest concern will be treated with the highest quality products. If you've got a pest problem or suspect that you may have one, look no further. We also want to be a source of information for our valued customers. Browse our pest library for useful information on specific pests, including but not limited to:

- ❖ Termites
- ❖ Rodents
- ❖ Ants
- ❖ Spiders
- ❖ Cockroaches
- ❖ Bed bugs
- ❖ Bees and Wasps

# COMMERCIAL PEST CONTROL

At Sea Green, we provide pest control services to a variety of businesses and commercial sites for various pest problems. We will work with you to keep your business safe, reducing the risk of product contamination. We offer pest management programs that are specifically tailored to you, no matter the size of your business.

Protecting your business's reputation is our first priority. Uninvited guests such as rodents (rats & mice) cockroaches, ants, flies, stored product pests, termites, and any other pests can cause severe damage to your business's reputation when unmanaged. We work with you to control the pests and the risk to your business, carrying out inspections on a regular basis and provide you with tips to reduce risk within your business.

Rest assured when you have your next food safety audit scheduled you don't have to worry about the pest control program as you have Sea Green working with you and your business. You can trust Sea Green to do the job right, and protect your reputation! In the commercial pest control industry, we have the capabilities to cover all of your pest control and prevention needs!

Our team is here to help, and customer service is our first priority. We are all about quick and efficient service offering a same day service. We have the knowledge and expertise to address any pest control requirement in any industry. All our professional pest technicians are fully equipped and able to carry out a large range of control methods on commercial sites, while ensuring the highest standards in safety and pest management are met. You can trust Sea Green to do the job right and protect your business's reputation!

## We Specialise in Commercial Pest Control for:

- ❖ Airports
- ❖ Offices
- ❖ Factories
- ❖ Hospitals
- ❖ Restaurants
- ❖ Warehouses
- ❖ Hotels / Motels
- ❖ Shopping Centres
- ❖ Child Care / Schools
- ❖ Transport and Logistics
- ❖ Food Manufacturing and Packaging
- ❖ Asset and Facility Management
- ❖ Local and State Government Facilities

In the food and beverage processing industry is a high risk threat because it can cause contamination and damage raw materials in various ways. Besides affecting your stocks, a pest infestation may also result in loss of revenue, customers' trust, fines and even prosecution. The production and packaging of food products is a highly competitive industry that demands the most stringent standards of quality and hygiene. In this environment, fouling or contamination of food from even minor pest activity is totally unacceptable.

Early detection and continuous monitoring are essential to minimise the risk of pest infestation. Our proactive pest control and reporting services are designed specifically for food manufacturers and food processing companies to ensure that pest activity will not have a negative impact on your standards or those of your customers and auditors.

A comprehensive pest control programme must strictly follow a number of guidelines and designed to minimise the risk of adulteration. Thus documentation and reporting are essential to analyse and review your pest management programme, and automation makes it more accessible for auditors to examine and traceability much easier when issues arise.

## QUICK SERVICE RESTAURANTS

Restaurants, cafes and bars are usually plagued with roaches, flies and rodents. Complaints of live infestations, dead insects or their body parts found inside the customer's food can virtually cause the establishment to shut down. Especially if brought to the notice of food safety inspectors. These sights are not only unsavory to health conscious patrons but can also drive them away towards competitors. It is imperative that these places remain clear of pests and infestations to ensure the safety of the customer. Pests also affect the food and produce being brought into the restaurant by contaminating product thereby damaging the brand and its reputation. Our team of experts will use our methodology in conjunction with the establishment to provide a customized program. With the use of exclusive technologies all your pest problems will be addressed to eradicate the problem at its source.

Our approach covers the entire facility and functions, right from receipt and storage of raw materials to cooking and serving. Our pest control solutions comply with all internal audit thresholds. Moreover, we can offer pest management services that are compliant with FSSAI guidelines. And we are available 24/7 to service any requirement. All our solutions are completely safe, ensuring that your pest problems will be eradicated without affecting the health of your employees or customers.

## HOSPITALITY INDUSTRY

Running a business in the hospitality industry can be stressful — you are constantly trying to impress your ever-expanding customer base. One thing that would shut down any restaurant, hotel, cruise line or other commercial business is a pest infestation. Whether guests are staying the night at your hotel, visiting your restaurant to eat dinner, or having a couple of drinks at your bar, you want to present a clean, tidy environment where your customers feel comfortable eating, drinking or sleeping.

To ensure that your commercial business is up to par to provide the best possible customer service, rely on the pest control company that has been providing expert pest control services

The pharmaceutical industry is faced with stringent sanitation requirements which means that there's a zero tolerance policy towards pests. This includes:

- ❖ Flying insects– these pests pose the greatest risk to pharmaceutical facilities. The most common flying insects found in these areas are house flies, fruit flies, bluebottles, drain flies, cluster flies and flesh flies
- ❖ Crawling insects– cockroaches cause particular problems because of their ability to hide in small places, they produce rapidly and they carry a number of diseases
- ❖ Rodents– rats and mice
- ❖ Birds
- ❖ Stored product insects – beetles, weevils, moths and mites

High levels of hygiene are essential because it's key that production lines are sterile and that you're complying with good manufacturing practice guidelines. This applies to all aspects of your business regardless of whether it's your clean rooms, workwear, products or equipment.

The reason why these high standards are in place is to ensure the strength, quality and purity of final products are maintained so that they're safe and effective for patients to use. Even the smallest changes in any of these factors can have serious consequences for consumers.

If you do have a pest problem, it can be incredibly costly – especially if it isn't dealt with as quickly as possible. The contamination of raw materials, store rooms, laboratories, production areas, packaging and finished products will result in huge economic losses because you will have to halt production and throw products away.

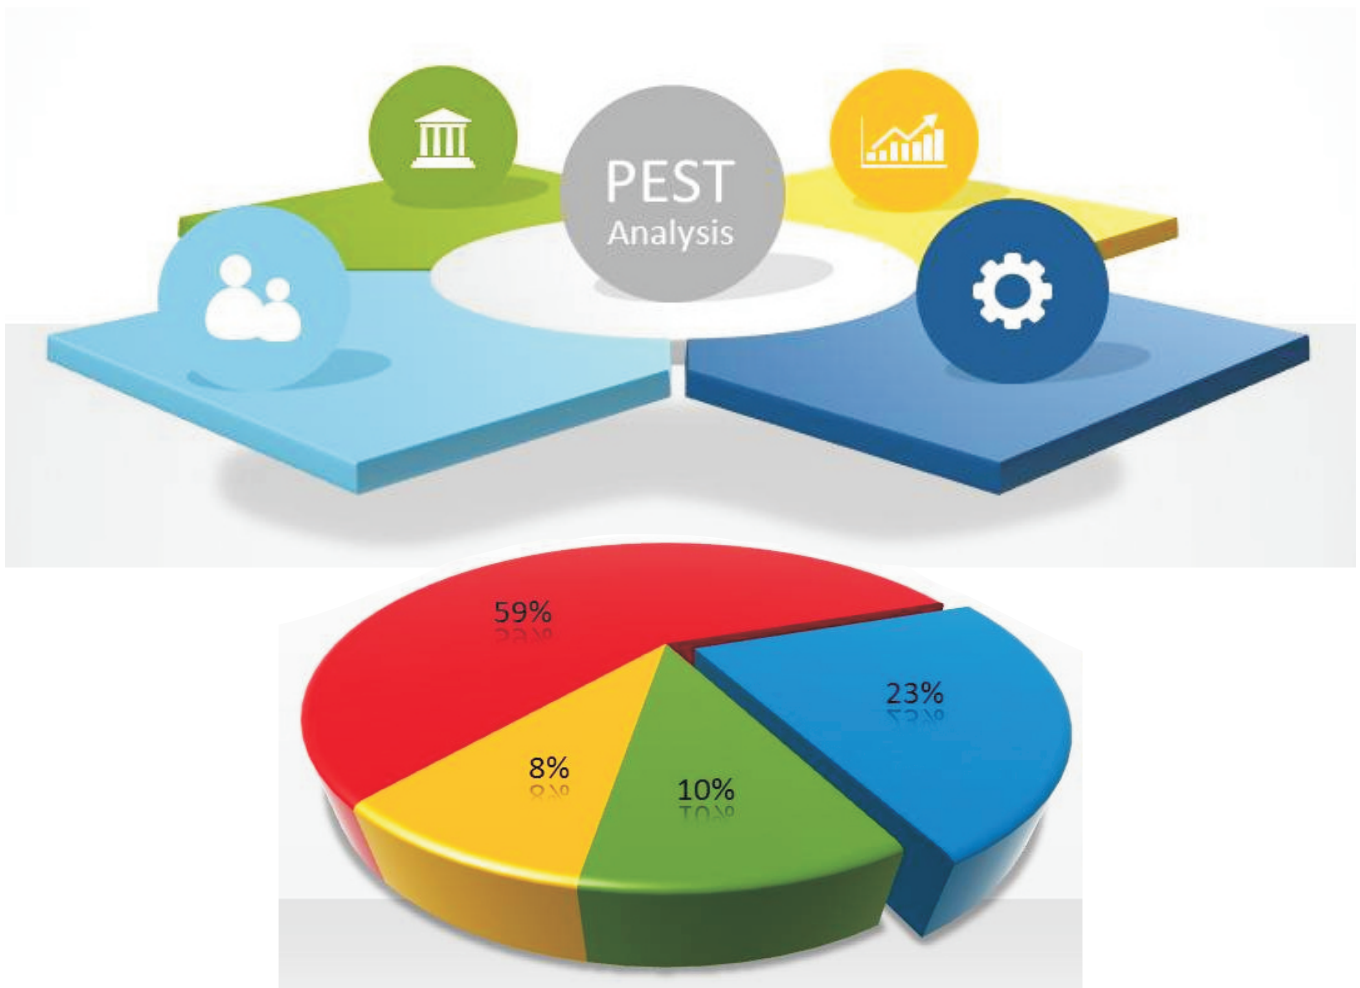

The pest control industry has seen a massive advancement in monitoring and baiting techniques over the last few decades. However a lot of warehouses have not kept their pest control procedures up to this rapid pace.

**The risks posed by pests to your business include:**

- ❖ The spread of disease
- ❖ Damage to property
- ❖ Contamination of your product and work surfaces
- ❖ Poor staff relations
- ❖ Severe loss of reputation and a building of negative public opinion
- ❖ Prosecution and even closure of your business

The risks listed above can have serious implications for your business. As such you need to create and maintain a pest control plan that mitigate these risks. The newer approach is more proactive and therefore, more effective in protecting your warehouse. This integrative method involves chemical and physical control methods, inspections and monitoring, habitat management, good building design, strong maintenance and exclusion practices.

Although auditors inspect your facility for proper placement of pest management devices and storage of pest management materials, documentation cannot be overlooked. During their assessment of food and beverage processing plants, food safety auditors will examine the plant for evidence of a formal, written pest management program, preventative and control treatments and proper documentation of the program. Of these three must-haves, documentation best demonstrates the plant's commitment to effective pest management, as updated and accurate records leave auditors a paper trail with which to evaluate the program.

Documentation is the only piece of evidence that demonstrates your facility's adherence to a formal pest management program. Without documentation there is no way to verify proper processes are being carried out, and as a result, you may end up with a mediocre audit score.

#### **Some of the records for pest management :**

- ❖ Onsite service records.
- ❖ Pesticide usage log.
- ❖ Pest risk analysis.
- ❖ Pest trend analysis.
- ❖ Pest inspection report.
